

Enhancing Resident Safety Through Innovation

At The Oasis Assisted Living at Fellowship Square Tucson, resident safety and independence go hand-in-hand. That's why we've introduced Helpany, an innovative technology designed to support proactive, compassionate care.

What is Helpany?

A Small Device Making a Big Difference!

Helpany's AI-powered care platform, called "Paul," uses advanced radar-based motion sensing technology to detect changes in movement and daily routines. There are no cameras, no microphones, no wearables. Just 24/7 real-time insights for our care team to respond quickly and effectively.

In Assisted Living apartments, small, discreet devices are placed in the living room and bedroom, providing support without disrupting daily life.

A Smarter, More Proactive Approach to Care

Helpany's technology allows our team to:

- Identify subtle changes in movement or routine
- Notify staff when a resident may need assistance
- Support faster response times
- Help reduce the likelihood of falls and related incidents

Supporting Independence & Peace of Mind

With Helpany working in the background:

- Residents feel more confident and secure
- Families gain added reassurance
- Care remains respectful, meaningful, and personalized

It's a quiet safety net that empowers residents to live freely, while knowing support is always nearby.

Want to Learn More?

We'd love to show you how Fellowship Square Tucson is using smart, compassionate solutions to enhance everyday living.
